CHAIMAA ZYANI

Data Scientist | Machine Learning & Analytics

CONTACT DETAILS

Casablanca

+212669678931

zyanichaimaa@gmail.com

TECHNICAL SKILLS

- Programming: Python (Pandas, NumPy, Scikit-learn)
- Machine Learning: Classification, Forecasting, NLP, Deep Learning
- Data & Cloud: SQL, BigQuery, GCP, ETL
- MLOps: Docker, Kubernetes, Kubeflow, CI/CD
- Visualization: Power BI, Looker Studio, Grafana, Prometheus

LANGUAGES

English : Fluent

French : Fluent

Arabic : Native

CENTER OF INTEREST

- Volunteering: Alumna and former Exchange Manager at AIESEC (Serbia/Morocco) for international project coordination;
- Technical: Open Source contributor to AI development.
- Personal: Hiking and Yoga.

Over **5+ years**, I've owned projects from **problem definition to deployment**, working with real data, real users, and real constraints. My strength is turning messy, ambiguous data into decisions teams actually use, while collaborating smoothly in remote, **cross-functional environments**.

PROFESSIONAL EXPERIENCE

Data Scientist, 07/2023 - Present
Royal Institute for Strategic Studies (IRES) - Rabat

- Generative AI & RAG (In-Progress): Architecting a privacy-centric **LLM** platform—similar to NotebookLM—utilizing **Retrieval-Augmented Generation** to enable secure, source-backed querying of confidential institutional documents.
- Leveraged **NLP** and sentiment analysis on large-scale social media datasets to monitor global discourse regarding the Moroccan Sahara, providing key insights for national policy.
- Implemented advanced text transcription using **OpenAI's Whisper model** to digitize and analyze verbal data for **strategic reporting.**
- Architected and automated **Power BI** dashboards integrating diverse data streams to deliver **real-time strategic KPIs** on national performance. (View public dashboard)
- Translated complex analytical findings into clear, actionable intelligence for non-technical stakeholders and executive audiences.

Data Scientist, 01/2020 - 06/2023
Kubermatic GmbH - Hamburg (Remote)

- Deployed and optimized deep learning models on **NVIDIA GPUs**, orchestrated via Kubernetes to ensure high availability and scalability. (Opensource.com)
- Integrated **Kubeflow** and CI/CD pipelines to automate model training and deployment, **reducing manual reporting by 80%** through real-time monitoring and streamlined **MLOps orchestration**.
- Developed an **automated** alerting system using **Prometheus and Grafana** data to predict hardware/service failures, proactively notifying the Dev team and reducing downtime.
- Engineered **Customer Churn** models to identify at-risk accounts, enabling data-driven interventions to protect revenue.
- Built a comprehensive BI and data ecosystem from the ground up using **BigQuery, Looker Studio, and Google Cloud Platform**, unifying data across multiple business units.

EDUCATION

Master's Degree in Data Science | 2018 – 2020
University Paris XIII – Sorbonne Paris Nord

Bachelor's Degree in Mathematics & Computer Science | 2015 – 2018
Hassan II University, Casablanca

COLLABORATIVE DATA SCIENCE PROJECTS

Omdena (Remote)

- SexEdPL: Applied NLP and sentiment analysis to assess global discourse on sex education policies.
- ULog: Designed a deterministic log normalization and classification pipeline to improve event log accuracy.

Springer Publication

- Short Literature Review: Deep Learning Approaches for Understanding Adverse Drug Reactions.
